012-392-3698 | Kuala Lumpur | chiajunyang1610@gmail.com | [LinkedIn](#) | [JobStreet](#)

PROFILE

IT student at Asia Pacific University (APU) specialising in Software Engineering, with hands-on experience in data analytics, Python, MySQL, and dashboard reporting. Demonstrated ability to extract actionable insights from datasets through exploratory data analysis and data visualisation. Active member of APU's Data Analytics Society. **Currently undertaking an internship (20 July – 10 October 2026, with option to extend) to apply analytical skills and contribute to data-driven decision-making.**

EDUCATION

Diploma in Information & Communication Technology (Software Engineering) July 2024 – Present
Asia Pacific University of Technology & Innovation (APU), Kuala Lumpur

- Current CGPA: 3.4
- Active member of the university's Data Analytics Society
- Relevant coursework: Programming with Python, Database Systems, Object-Oriented Programming, UI/UX Design, Web Design & Development, DevOps & Low-Code Development

Sijil Pelajaran Malaysia (SPM)

Completed 2023

SMK St. Gabriel

- Distinctions in Mathematics & English

SKILLS

Languages: Python, PHP, HTML, CSS, Java, JavaScript

Backend & APIs: FastAPI, Node.js

Frontend: React (Vite), React Native (Expo), Tailwind CSS, Recharts, Plotly.js

Databases: PostgreSQL, MySQL, Supabase, SQL optimization, Data Modeling

Frameworks & Libraries: SQLAlchemy ORM, Alembic migrations, APScheduler, Faker, scikit-learn, pandas, matplotlib, seaborn

Data & Analytics: Jupyter, Power BI, Streamlit

Tools & Platforms: Git/GitHub, Visual Studio Code, Android Studio, Figma, Joget DX, Docker (basics), Postman

Other: ERD Design, Low-Code Development, OOP principles, UI/UX Design

PROJECTS

Jobnow – Mobile Job Matching Application

2026

React Native (Expo), Node.js, Supabase, Android Studio

- Developed a swipe-based mobile job matching platform as the Diploma capstone project, connecting job seekers and employers with real-time matching and in-app chat features.
- Implemented full backend with Supabase and Node.js; delivered a cross-platform Android-compatible app.

EcoQuest – Environmental Reward Web Application

2025

HTML, CSS, PHP, MySQL

- Built a web-based reward platform enabling students to complete eco-tasks, track points, and redeem rewards through dynamic, database-driven features.

Smart Expense Reimbursement System

2025

Joget DX (Low-Code)

- Designed a low-code expense management system featuring multi-level approval workflows, role-based access control (RBAC), automated calculations, and real-time dashboards.

Sales Data Analysis

2026

Python, Pandas, Matplotlib

- Performed exploratory data analysis on a sales dataset; automated KPI calculations (total revenue, top products, regional distribution) and visualised monthly sales trends via line graphs.

Education Management System

2025

Python

- Built a role-based system (Admin, Tutor, Staff, Student) using modular functions and file I/O for structured data storage and retrieval.

Advanced Tuition Centre Desktop Application

2025

Java, NetBeans, Java Swing

- Developed a desktop GUI application for managing tuition centre operations, applying OOP principles to handle student, tutor, and course records.

Arahku – Navigation Map System UI Prototype

2025

Figma

- Designed mobile and car-tablet UI prototypes for a personalised navigation system, focused on accessible, user-centred design that simplifies decision-making.

HabitFlow – Habit & Mood Analytics Platform

Python, PostgreSQL, Jupyter, Power BI, React Native (Expo)

Description: Full-stack habit tracking and mood analytics application.

- Backend: Async FastAPI with JWT authentication, 4 normalized PostgreSQL tables, Alembic migrations, 500+ seeded users
- Analytics: Jupyter notebook with 12 charts (EDA, cohort retention, mood correlation, churn prediction, K-Means segmentation)
- Dashboard: Power BI connected to PostgreSQL with auto-detected relationships
- Frontend: React Native (Expo) with secure credential storage
- Seed Data: ~2.5K habits, ~395K check-ins, ~82K streaks

FitLog Pro – Workout & Nutrition Tracker

Python, PostgreSQL, React (Vite), React Native (Expo), Recharts, Jupyter

Description: Multi-platform fitness analytics application with web dashboard and mobile client.

- Architecture: FastAPI async backend, PostgreSQL optimized for analytics, Alembic migrations
- Web Dashboard: React with Vite, Tailwind CSS, Recharts for workout trends, PR leaderboards, retention heatmaps
- Mobile App: Expo React Native client with SecureStore credential management
- Analytics: Jupyter notebook (workout progression, macro tracking, body composition, churn prediction)
- Seeding: Faker-generated users and realistic workout/nutrition data

TransitPulse – Public Transit Analytics Pipeline

Python, PostgreSQL, Streamlit, Prophet, Plotly, Jupyter

Description: End-to-end data engineering project analyzing KL public transit ridership.

- ETL Pipeline: Python ingestion from Malaysia's GTFS API, 500K+ synthetic ridership facts
- Data Warehouse: PostgreSQL star schema (dim_date, dim_time, dim_route, dim_stop, fact_ridership) optimized for OLAP
- Forecasting: Prophet time-series model predicting 90-day ridership trends
- Dashboard: Streamlit with Plotly (heatmaps, stop maps, trend lines, filters)
- Notebooks: EDA with peak-hour demand analysis, route performance, forecasting validation

PriceWatch MY – E-Commerce Price Tracking Platform

Python, APScheduler, PostgreSQL, Faker, Jupyter, Power BI

Description: Synthetic e-commerce price tracker demonstrating scheduler automation and deal detection.

- Scheduler: APScheduler running every 6 hours, 8% flash sale probability, 5-15% price volatility
- Data Generation: 200+ Faker products across 6 categories (Electronics, Fashion, Beauty, Home, Groceries, Sports)
- Analytics: Deal detection scoring using 30-day high benchmarking; Electronics volatility ~12%
- APIs: FastAPI endpoints for products, deals, categories, dashboards, manual scrape triggers
- Dashboard: Power BI connected to PostgreSQL for real-time price trends
